Activity #6

Part 1: Unix

1. What command would you use to compile project.c which uses mymath.o and linkedlist.o and the library libhelplib.

2. What is the command to compile badvirus.c into an executable called coolgame.exe

Part 2: C

3. Write a C program that defines a structure called act6_t that has an integer field and a string field (use a character array, not a pointer). In your main method, dynamically allocate an act6_t structure, prompt the user for each field, then display the structure.
